

LINKER EUROPA Sp. z o.o.

provides a complete, constantly evolving
range of goods and services
to the beverage industry

- has fifty-year experience in the manufacture and sale of beverage bottling equipment
- maintains a staff of approximately 150 engineers and technicians at two plants/factories in New Jersey - USA, and Tyczyn-Rzeszow - Poland, as well as 20 technicians and supervisors working at installation sites throughout the world on a permanent basis
- provides a complete, constantly evolving range of goods and services to the beverage industry (these include production equipment and parts, engineering and design expertise, installation, commissioning and training of plant personnel)
- possesses knowledge of the international beverage machinery market which has expanded our customer base worldwide (Europe, North and South America, Africa, Asia, Australia)
- thanks to professionalism and the high quality equipment is an approved supplier of new and rebuilt equipment for Pepsi Cola, Coca Cola and many others bottlers

RINSING-FILLING-CAPPING MONOBLOCKS

- for different kinds of beverage (e.g. still water, carbonated water, juice, beer, etc.)
- capacity from 80 to 800 bottles per minute
- can handle packages from 0.1l to 5.0l, square or cylindrical shapes
- made from stainless steel (SS)
- equipped with a centrally located control panel for operator convenience
- have fewer moving parts than most of competitors
- modern, compact design save valuable floor space and allow installation in areas of restricted space

MIX-PROCESSORS

- for saturation products with CO₂
- depending on product's type equipped with ammonia, glycol or other cooling system
- easily meet every capacity demand of present day high speed bottling lines

PACKERS

- for bottles or cans
- kind of packages (e.g. foil film only, foil film with a carton or tray under, carton boxes, etc.) and capacity depending on customer's requirements

UNCASERS

- for unpacking bottles from boxes
- Heavy Duty mild Steel Construction
- two machines' types according to boxes' height:
 - belt (for low boxes)
 - full depth (for high boxes)

PALLETIZERS & DEPALLETIZERS

- for automatic/semiautomatic placement of carton (plastic) boxes on pallets or pallets unloading
- for different pallets sizes
- capacity, way of palletizing and level of automation conditional on customer's preferences

CONVEYORS

- for transportation of different products' types between particular machines placed in the line
- wide range of conveyors
 - air conveyors
 - table top conveyors
 - roller conveyors
 - cable conveyors
- equipped with advanced programmable electronic line control systems for fully synchronized operation of the entire production line their modular construction allows for future modifications concerning i.a. way of packaging or increased line speed demand
- their modular construction allows for future expansion to meet package changes or increased line speed demand
